Product Code: HCA250WS0015

Availability: 100

Weight: 0.00kg

Dimensions: 0.00cm x 0.00cm x 0.00cm

Price: CA\$115.00

Description

**DIAMOND BLADE 1A1R 10" HARD CERAMIK ADVANCED:
for cutting ceramic granite of any thickness**

Louis was a recognized master of his craft, especially in working with granite and marble. However, when faced with the task of laying 3/8" (20mm) thickness [Porcelain Tile](#) around the pool and on the deck, he decided to use the new DIAMOND BLADE 1A1R 10" HARD CERAMIK ADVANCED diamond blade which:

Description

- Specially designed for high-speed cutting of ceramic granite 20mm and thicker.
- Includes graphite chips that create a microporous structure.
- Subjected to laser segmentation to reduce thermal loads on the blade.

Since frost-resistant ceramic granite is used for outdoor work and can have a thickness of up to 1" (25mm). Due to its structure and thickness, it requires more effort to process compared to regular porcelain tile.

The project required precision and artistry. Louis decided to use a waterjet cutting machine to cut the porcelain tile, ensuring clean and neat cuts. With the help of the HARD CERAMICS ADVANCED diamond blade, he was able to cut the porcelain tile quickly and efficiently, preserving its strength and quality.

When the work was completed, the pool and the deck around it became a true work of art.

The laying of the porcelain tile was flawless, and Louis was recognized for his craftsmanship. His talent and the use of high-quality tools allowed him to create a unique and beautiful space for relaxation and entertainment.

Characteristics
